

ESF Spreader Range

Spreading pasty materials can often be problematic: too runny for standard spreading techniques, but not liquid enough for a slurry spreader. That's precisely why we have designed the ESF range for you. The basic principle is very simple, but extremely efficient and effective: a watertight body shell, a worm-type conveyor and a turbine all combined enable you to get rid of your olive husks, liquid manure and all your other pasty materials.

Standard model

Worm-type conveyor with turbine - outside diameter 150 mm
 Standard wheels
 Standard Cardan shaft
 Mechanical and hydraulic brakes,
 Lights, approved for road use - 25 km/h

Extra options

- * deflectors
- * hatch with hydraulic opening system

ESF 3200

Hatch option with hydraulic opening system

Model	GVW (kg)	Volume (m3)	Length x Width x Height (body shell)	Overall Width	Loading Height	Wheels
ESF 3200	4500	3,2	3m00 x 1m50 x 1m30	1m57	1m46	10.0/75-15.3 14 ply
ESF 5000	7000	4,9	3m00 x 1m80 x 1m35	1m92	1m80	12.5/80-15.3 14 ply

Options available :

Hatch with hydraulic opening system

Equipement :

Worm-type conveyor
